Brazil, Minas Gerais

Hello everyone.

My name is Matheus, I'm 27 years old, and I live in Uberaba, Minas Gerais, Brazil. I hold a Bachelor's degree in Chemical Engineering from UFTM, obtained in 2021, and I am currently pursuing an MSc in Data Science and Analytics at USP-ESALQ.

I have supplemented my formal education with relevant coursework from institutions like Stanford Online, Google (Google Certified) and Data Camp.

Presently, I work as a Data Scientist/LLM Engineer at Turing, where I specialize in developing Python-based solutions to enhance the performance of large language models (LLMs) for a leading U.S.-based technology company.
My role involves designing data-driven strategies, optimizing algorithms, and proposing improvements that contribute to advancing state-of-the-art AI technologies.

Prior to this, I spent three years honing my expertise in Data Analysis, Business Intelligence, and Data Science, working at DiDi Chuxing (known as 99 in Brazil), a global mobility technology leader. My work involved leveraging tools such as SQL, Python, Pandas, and various Big Data solutions to support strategic business decisions through supervised and unsupervised machine learning models. This experience earned me two promotions and recognition for outstanding performance. I am deeply passionate about using technology to create impactful solutions that benefit colleagues, stakeholders, and the business at large. I look forward to learning more about the organization and contributing my skills and dedication to its success.

Thank you for your attention, and I look forward to connecting soon!
